

Q1: Is technological advancement minimizing our privacy?

- In the novel 1984, the citizens are kept under strict surveillance. It is known that every home has a television which not only serves to constantly play propaganda but also as a tool to keep a close eye on the people in their homes to ensure no crimes are being committed.
- According to Anita L. Allen, it has become more difficult to be excluded from the technological advancements. Regardless whether we try to avoid the digital aspects in our life, we can't control that the fact that the use of technology around us is increasing. Whether we want our information in the digital data systems or not no longer matters.
- Allen believes that privacy is a human right that should be protected by the government because ethics of privacy refers to "respecting individuals' choices in the name of respecting their dignity" (Allen, 2019).
